### Education

MSc/MS Engineering Management  
(Technical University of Denmark - DTU, Lyngby, Denmark)

BSc/BS Civil Engineering  
(Rensselaer Polytechnic Institute, Troy, New York, USA)

### Expertise

Project management

Engineering management

Quality systems and processes

Wind turbine technologies

Project consultancy

### Selected Experience

Deputy Construction Manager,  
Race Bank Offshore Wind Farm, UK  
(Siemens Gamesa Renewable Energy)

Change Implementation Specialist  
(Siemens Gamesa Renewable Energy)

Data Analyst – Tender Excellence  
(Siemens Wind Power)

## AJ Negrelli Senior Associate

AJ Negrelli is an experienced project engineer, with a record of delivery in complex wind energy projects. He has been involved with construction and project management in offshore markets worldwide.

Working on offshore wind construction projects, Mr Negrelli has supervised project delivery and handover on major European renewable energy developments. He brings a wealth of practical knowledge to clients on implementation planning, resource requirements, and managing technical changes for the delivery of major infrastructure schemes.

With experience in the delivery of engineering and project management services for international wind turbine suppliers, Mr Negrelli has experience in leading the construction elements of offshore wind projects, including managing technical solutions, quality management and technical documentation, change management processes, project resourcing, and handover to the end-client. He has worked successfully with stakeholders to ensure technical aspects of projects meet construction contract requirements and local safety standards. Mr Negrelli has also developed data analysis tools and processes to improve tendering.

Mr Negrelli is qualified in civil engineering with a further degree in engineering management.

## Representative Assignments

### – Construction management

Deputy construction manager for a global offshore wind turbine supplier on a large UK offshore wind farm, creating implementation plans, checking technical solutions, managing customer interfaces, and encouraging a zero-harm culture.

### – Technical change management

Change implementation specialist for a UK offshore wind farm, performing quality checks on engineering change requests, engaging site managers, delivering technical change solutions, and managing customer expectations.

### – Tender excellence

Designed and implemented processes and tools for the analysis of documents and data related to wind turbine tenders.
