FOR IMMEDIATE RELEASE

RCG unveils GRIP 2.0 database platform with enhanced functionality

London, England – 16th June 2021 - The Renewables Consulting Group (RCG) has launched the next generation of its proprietary Global Renewable Infrastructure Projects (GRIP) database platform.

Featuring new functionality and enhanced features, GRIP 2.0 provides the market's most authoritative source for essential offshore wind project data and forecasts. It provides critical data, updated in real time, on a platform that is easy-to-use and which can be targeted toward client needs.

RCG's sophisticated and tailored market modelling and understanding of levelized energy costs allows clients to benchmark projects, build merit orders, and compare public data with their proprietary information. We combine our database and geographic information system (GIS) services to manage, interrogate, and present data. Our team of subject matter experts can work with you to customise our reliable and flexible data to meet your specific needs, delivering it in the format you require.

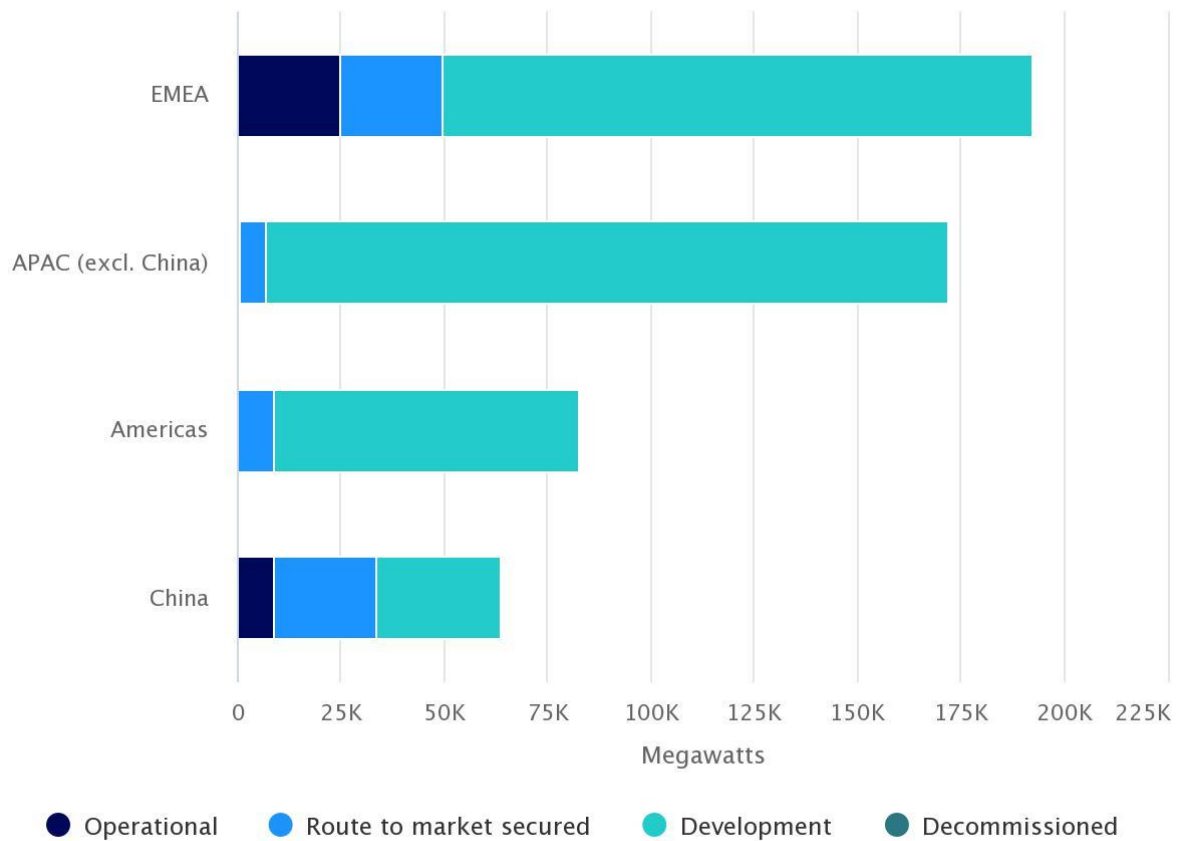

The online database allows users to query and extract data by country, project, participant, status, associated infrastructure, assets, among many other items and permits in-depth comparisons and other types of data analysis.

Commenting on the product's enhancement, market intelligence expert Sebastian Rae, Associate Director, said:

"GRIP 2.0 turns data into valuable insights. Through GRIP 2.0, we are delivering a new way of accessing data and forecasts that will give our customers faster and higher quality information to support growth in their businesses." – Sebastian Rae, Associate Director

We apply our analytical workflow to assess the quality of the data before incorporating information into our proprietary databases and forecasting models. Add to the mix the knowledge and industry foresight of the highly experienced team at RCG and you have at your fingertips high quality information you can rely on to support the growth of your business.

Market Overview by Region

Data powered by RCG

Dynamic forecast from RCG's GRIP 2.0 dashboard.

GRIP Offshore Wind is a dynamic tool that provides the following:

- A solution that is tailored to your organisation's requirements
- Customisable search functionality
- Verified project, supply chain and market data
- Wide-ranging dashboards and downloadable summary charts
- Exportable database searches to .xls
- RCG's proprietary expenditure, commissioning, installation and manufacturing forecast
